Subject: Dico Extraction Well #6 Update

Erin, as I notified you by voicemail, a contractor was at Dico today to do hydroblast cleaning of the piping for extraction well #6. The cleaning of the piping resulted in a significant decrease of pressure on the pump and motor for extraction well #6.

Upon restarting extraction well #6, the well is getting a lot of air in the pumped water (well screen may be blocked). Extraction well #6 has been shut off to prevent damage to the motor and pump due to air going through the pump.

I have contacted the well contractor and he will be troubleshooting extraction well #6 to determine why it is getting air in the pumped water. I will keep you updated on the progress of this issue.

Brian Mills
